BREAST RECONSTRUCTION AND SKIN DONATION FACTS

BRA Day is a public education campaign designed to raise awareness of the options available for breast reconstruction after mastectomy.

1. The Women's Health and Cancer Rights Act of 1998 requires health plans that offer breast cancer coverage to also provide for breast reconstruction and prostheses.
2. Breast reconstruction using skin grafts in the form of acellular dermis matrices provides great outcomes for women.
3. Last year, almost 60,000 successful breast reconstruction procedures were conducted using donated dermal skin grafts.
4. 1 skin donor can help up to 5 women undergoing breast reconstruction surgery.
