

Preserving Your Patient's Donation Opportunity

Many things need to occur for one person to save a life through organ donation. Without an invested hospital care team, the donation opportunity could easily be lost.

How can you help preserve your patient's donation opportunity?

1. **Keep it simple - Coaching your team to remember what is good for the patient is good for the donor**
2. **Remember and remind the care teams the rules of 100's -**
 - a. **Systolic BP-100**
 - b. **Urine Output-100**
 - c. **PaO₂-100**
3. **Remind your team to never make assumptions on who can be a donor. Many rule outs from the past may no longer preclude donation. Rely on LifeCenter Northwest to determine donor suitability.**
